Information On Demand

Today's fast paced market place requires new tools to disseminate information. For on-site information deployment, interactive self-service kiosks create a lasting impression for your customers and visitors who came to you to find answers to their questions.

With our kiosk content management and event scheduler tool Touch Presenter™ on your side you now can offer a wide variety of readily available information that is accessible through a simple touch on the screen. And this information is interactive, paperless, and never obsolete.

Touch Presenter is designed to help businesses like yours to manage their kiosk content and build navigation and other infrastructure that drives the kiosk. Just import the content you have created with familiar software programs: TouchPresenter accepts PowerPoint presentations and HTML pages, dynamic multimedia content like videos and it lets you link to a menu of surveys created with Digivey Survey software. It makes all this content available to your audience on the spot, in a safe self-service environment. Setting up scheduled events gives you even more control of what content should be screened at the kiosk at particular times.

Stimulate the Senses of Your Audience

Whether your organization has just started or has been there for many years — you have an engaging story to tell about your products, your services, the projects your company has completed and other news and stories around your organization and its environment. Whatever it is you want to share with your customers and visitors — TouchPresenter will help you publish it to the kiosk in a few, easy steps.

Your customers can browse through the kiosk

Self-Service Information. Anytime.

content at their discretion or simply follow the menu and submenu suggestions. During idle times at the kiosk, the screening of videos, ads, special events, and other content featuring your business and its products helps to attract new users to the kiosk and to keep the audience informed.

Flexible and Customizable

Touch Presenter™ leaves you maximum flexibility for managing your kiosk content. It makes the task fast and easy for you. You can create a user friendly kiosk interface for your customers quickly and efficiently.

An unlimited number of presentations and documents that you want to make available to your customers can be stored and scheduled. The look and feel of your kiosk content and kiosk user-interface is customizable and editable.

The Touch Presenter™ is designed to leave your creativity maximum freedom. No programming knowledge is needed to create menus, edit existing menus, add and delete buttons, add and delete messages, add logos and implement other design elements.

Security and Uptime Monitoring

Touch Presenter™ also has built-in security features to keep your kiosk safe from unauthorized access.

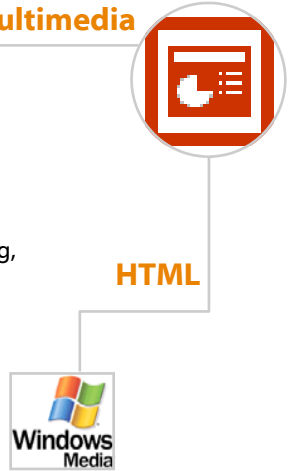

Touch Presenter™ in a desktop solution with a 19" ELO touch panel monitor

The add-on function of ekiosk-Guard software is a helpful, automated tool to monitor the kiosk's uptime and to create kiosk logs. Kiosks that are connected to the internet or a network also feature remote publishing and remote kiosk content updating.

PowerPoint & Multimedia
